## 540HR3C

### Features

- Single color
- High bright output
- Low power consumption
- High reliability and long life

### Descriptions:

- Dice material: AlGaInP
- Emitting Color:  
Super Bright Red
- Device Outline:  
φ 5mm Round Type/ 5mm
- Lens Type:  
Water Clear

1. All dimensions are millimeters
2. Tolerance is +/-0.25mm unless otherwise noted

### Directivity:

# LED SPECIFICATION

## Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Test Condition	Value		Unit
			Min.	Max.	
Reverse Voltage	V <sub>R</sub>	I <sub>R</sub> = 30 μ A	5	--	V
Forward Current	I <sub>F</sub>	----	----	30	mA
Power Dissipation	P <sub>d</sub>	----	----	75	mW
Pulse Current	I <sub>peak</sub>	Duty=0.1mS, 1kHz	----	100	mA
Operating Temperature	T <sub>opr</sub>	----	-40	+85	°C
Storage Temperature	T <sub>str</sub>	----	-40	+100	°C

## Electrical and optical characteristics (Ta = 25°C)

Parameter	Symbol	Test Condition	Value			Unit
			Min.	Typ.	Max.	
Forward Voltage	V <sub>F</sub>	I <sub>F</sub> = 20mA		V <sub>2</sub> ~V <sub>4</sub>		
Reverse Current	I <sub>R</sub>	V <sub>R</sub> = 5V	----	----	30 μ A	
Dominate Wavelength	λ <sub>d</sub>	I <sub>F</sub> = 20mA		R <sub>2</sub> ~R <sub>4</sub>		
Spectral Line half-width	Δ λ	I <sub>F</sub> = 20mA	----	20	nm	
Luminous Intensity	I <sub>V</sub>	I <sub>F</sub> = 20mA		R~T		
Viewing Angle	2 θ 1/2	I <sub>F</sub> = 20mA	32		40 Deg.	

# BIN ranking for LEDs

## BRIGHTNESS BIN

Bin Code	IV(mcd)	Bin Code	IV(mcd)	Bin Code	IV(mcd)	Bin Code	IV(mcd)
A	0-5.0	H	37.2-52.0	Q	390-550	X	4180--5860
B	5.0-7.0	J	52.0-72.8	R	550-770	Y	5860-8200
C	7.0-9.8	K	72.8-102	S	770-1100	Z1	8-10cd

# LED SPECIFICATION

## Typical electrical/optical characteristic curves:

# LED LAMP APPLICATION

## •SOLDERING

METHOD	SOLDERING CONDITIONS	REMARK
DIP SOLDERING	Bath temperature: $260 \pm 5^\circ\text{C}$ Immersion time: with 5 sec	<ul style="list-style-type: none"> <li>Solder no closer than 3mm from the base of the package</li> <li>Using soldering flux, "RESIN FLUX" is recommended.</li> </ul>
SOLDERING IRON	Soldering iron: 30W or smaller Temperature at tip of iron: $260^\circ\text{C}$ or lower Soldering time: within 5 sec.	<ul style="list-style-type: none"> <li>During soldering, take care not to press the tip of iron against the lead.</li> </ul> (To prevent heat from being transferred directly to the lead, hold the lead with a pair of tweezers while soldering)

1) When soldering the lead of LED in a condition that the package is fixed with a panel (See Fig.1), be careful not to stress the leads with iron tip.

2) When soldering wire to the lead, work with a Fig (See Fig.2) to avoid stressing the package.

## LED LAMP APPLICATION

- 3) Similarly, when a jig is used to solder the LED to PC board, take care as much as possible to avoid steering the leads (See Fig.3).

- 4) Repositioning after soldering should be avoided as much as possible. If inevitable, be sure to preserve the soldering conditions with irons stated above: select a best-suited method that assures the least stress to the LED.
- 5) Lead cutting after soldering should be performed only after the LED temperature has returned to normal temperature.

### •LED MOUNTING METHOD

- 1) When mounting the LED by using a case, as shown Fig.4, ensure that the mounting holds on the PC board match the pitch of the leads correctly-tolerance of dimensions of the respective components including the LED should be taken into account especially when designing the case, PC board, etc. to prevent pitch misalignment between the leads and board holes, the diameter of the board holes should be slightly larger than the size of the lead. Alternatively, the shape of the holes should be made oval. (See Fig.4)

## LED LAMP APPLICATION

2) Use LEDs with stand-off (Fig.5) or the tube or spacer made of resin (Fig.6) to position the LEDs.

### ●FORMED LEAD

1) The lead should be bent at a point located at least 2mm away from the package. Bending should be performed with base fixed means of a jig or pliers (Fig.7)

2) Forming lead should be carried out prior to soldering and never during or after soldering.  
3) Form the lead to ensure alignment between the leads and the hole on board, so that stress against the LED is prevented. (Fig.8)

•LEAD STRENGTH

1) Bend strength

Do not bend the lead more than twice. (Fig.9)

2) Tensile strength (@Room Temperature)

If the force is 1kg or less, there will be no problem. (Fig.10)

•HANDLING PRECAUTIONS

Although rigid against vibration, the LEDs may damaged or scratched if dropped. So take care when handling.

•CHEMICAL RESISTANCE

- 1) Avoid exposure to chemicals as it may attack the LED surface and cause discoloration.
- 2) When washing is required, refer to the following table for the proper chemical to be sued. (Immersion time: within 3 minutes at room temperature.)

SOLVENT	ADAPTABILITY
Freon TE	⊙
Chlorothene	×
Isopropyl Alcohol	⊙
Thinner	×
Acetone	×
Trichloroethylene	×

⊙--Usable    ×--Do not use.

NOTE: Influences of ultrasonic cleaning of the LED resin body differ depending on such factors as the oscillator output, size of the PC board and the way in which the LED is mounted. Therefore, ultrasonic cleaning should only be performed after confirming there is no problem by conducting a test under practical.

# LED LAMP PASSED TESTS

### Drive Method

(A) Recommended circuit.

(B) The difference of brightness between LED's could be found due to the  $V_f$ - $I_f$  characteristics of LED.
